

Case Study: Apollo

The Challenge

The Apollo Group is the construction and facilities management company for the University of Phoenix. To match the rapid expansion of the University, Apollo needed to upgrade its customer service, responsiveness and efficiency capabilities.

The IES Solution

IES has had the privilege of working with Apollo for more than 10 years on many large and complex projects. IES was able to work with Apollo to provide comprehensive communications solutions and to implement innovative technology for the University.

In 2005, IES designed and installed the cable plant infrastructure for the Apollo Group's new data center in Phoenix, Arizona. Later, IES was awarded the new Riverpointe campus cabling installation contract that originally was for a new 10-story administrative facility, but was extended to include two six-story facilities and two parking garages. IES provided all of the voice/data, fiber optic, security/access control and surveillance infrastructures, and equipment for all of these facilities.

The Rewarding Results

IES is now the single source provider of cabling systems across the U.S., Canada and Puerto Rico for the Apollo Group/University of Phoenix. IES also supports substantial MAC work across the U.S. for the Apollo Group, including a new printer maintenance contract to support all of the Apollo Group/University of Phoenix's printers nationwide.
