

By the Numbers

7 Major industry building standards met or exceeded, including ASCE and NEC

-40 Degrees Celsius rated protection for extreme environments

18 Gauge powder-coated, galvanized steel sides and walls ensure integrity

Customized Power

IES provides custom packaging of electrical equipment and drive systems into custom manufactured enclosures from our Houston, Texas facility. We also manufacture non-segregated bus duct, metal-clad switchgear and motor control equipment. Our reference list of satisfied customers includes industry-leading companies in refining, chemical, power generation, oil and gas exploration and more. We also have key vendor relationships with major product manufacturers for electrical equipment and drive systems to ensure the successful completion of even the most complex projects.

IES has vast experience manufacturing enclosures to a wide variety of specifications. Our installed projects include multiple split and multilevel designs ranging from 100 square feet to over 4,000 square feet enclosures. In addition to complete fabrication capabilities, we offer a superior, semi-automated powder coat finish as a standard process.

Utilizing a Power Distribution Center to package equipment on your next project can transition higher-cost field labor into lower-cost manufacturing labor, eliminate site weather delays and enable factory acceptance testing prior to site arrival, reducing startup time and cost. Our electrical construction and field installation services provide complete solutions that exceed your needs.

Why you benefit

- Our ISO-compliant process ensures quality power distribution centers
- Our custom approach ensures your power distribution center is designed to specifically meet your needs
- Our 80-ton lift capacity and 13 acre facility allows us to manufacture to your specified scope
